#### Introduction

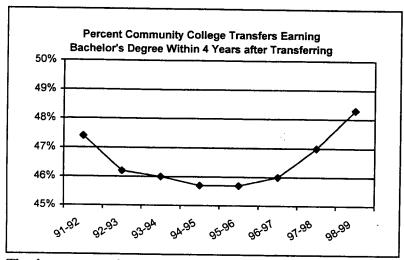

This report looks at 10-year trends in the performance of community college transfer students at Maryland public four-year colleges and universities. The number and percentage of community college students who earned a bachelor's degree from a public four-year campus in the State within a specified period of time is analyzed, as is the cumulative grade average (GPA) earned by transfer students in their first year at a public four-year institution. The first section of the report examines statewide trends in the performance of all transfer students, African Americans, and all minorities. "All minorities" in this report refers to African Americans, Asian Americans, Hispanics, and Native Americans. The second section focuses on campus trends: performance of transfers at each community college and each four-year institution. Tables containing trend data are presented in the Appendix.

The figures provided come from the Maryland Higher Education Commission's Transfer Student System (TSS). TSS collects data by academic year about students who were entrants to public four-year institutions as transfers from Maryland community colleges during the preceding five years. Once a student is defined as a transfer in an academic year, s/he continues to be reported for the five-year period regardless of enrollment status. Starting with the 1991-1992 year, a transfer entrant is defined as a student who transferred to the public four-year institution with at least 12 credit hours anytime during the academic year. However, TSS does not contain data about the precise number of credits which transfer students bring from their community college; this represents a major limitation of the system in tracking graduation rates since individuals can transfer as many as 60 hours from a two-year institution. As a result, the percentage of students who are reported as having earned a bachelor's degree within a certain numbers of years after transferring can be expected to have varied widely in the number of credits that they brought from their community college. In addition, TSS cannot track the outcomes of community college students who transfer to a Maryland independent or an out-of-state institution.

Reported prepared by: Laura Filipp

#### All Students

The percentage of community college students who earned a bachelor's degree within four years of transferring to a public four-year institution has risen in the last three cohorts.

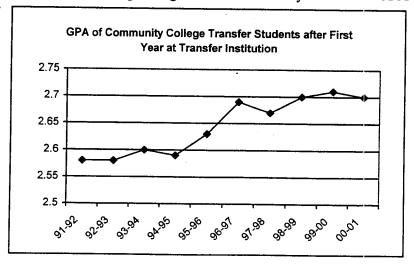

Of the students who transferred during 1998-1999 academic year, 48.3 percent earned a bachelor's degree from their transfer institution within four years. This is the highest graduation achieved rate community college transfer students since the Commission began collecting these figures.

The longer transfer students were enrolled at the public four-year institution, the higher the graduation rate (Table 1). Data from the eight most recent transfer cohorts show that 9 to 14 percent of transfer students earned a bachelor's degree within two years of transferring; 29 to 35 percent within three years; 46 to 48 percent within four years; and 50 to 53 percent within five years.

The academic performance of community college transfer students during their first year at a public four-year institution has been improving over the last 10 years. The GPA

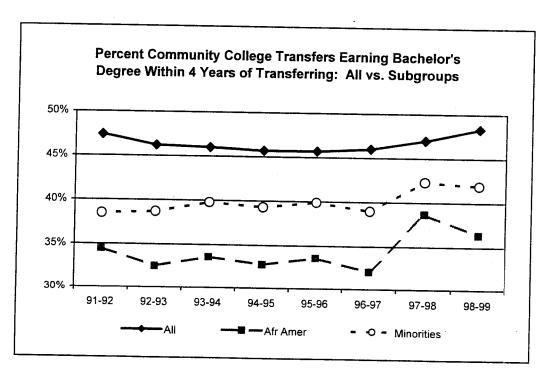

earned four-year institutions by community college students transferring in 1991-92 was 2.58, while the GPA of students transferring in 2000-01 was 2.70 (Table 2). The **GPAs** achieved by Maryland community college transfer students in the past three cohorts have been the highest on record.

#### **Minority Students**

The proportion of minority community college transfer students who earned a baccalaureate within four years of transferring also has increased since the 1991-1992 cohort (Table 3). More than 40 percent of all minority transfer students in the past two cohorts graduated within four years — **the highest yet.** The graduation rate of minority community college transfer students has continually trailed the average of all students. However, the graduation rate of minority community college transfer students in 1998-1999 was over three percentage points higher than those who transferred in 1991-92 (Table 3). This level of increase means that the gap is closing.

The GPA earned by minority community college transfer students in their first year at a public four-year institution reached record highs in the past three cohorts. All minorities earned a GPA of 2.56 in 2000-2001, considerably above the 2.38 achieved in 1991-1992 (Table 4). The GPA earned by all minority transfer students has consistently trailed that of all transfers, however.

#### African American Students

African American community college students who transferred in 1998-99 achieved a 36.4 percent four-year graduation rate—almost two percentage points higher than African American students who transferred in 1991-92 (Table 5.). The graduation rates of African American transfers in the past two cohorts were the greatest in the State's history. As in the case of all minority students, a persistent gap lingers between the baccalaureate achievement of all transfer students and those of African Americans. However, this difference has narrowed slightly since 1991-1992.

The GPA of African American students after their first year at their transfer institution was higher in each of the past five cohorts than in any of the earlier five (Table 6). In 1991-1992, the GPA was 2.36, compared to 2.51 in 2000-2001. As in the case of all minority students, the GPA attained by African American transfer students has regularly trailed that of all community college transfers.

#### **Campus Patterns: Community Colleges**

Rates varied greatly among community colleges regarding the percent of their transfer students who earned a bachelor's degree within four years of enrolling at a public four-year institution (Tables 7 through 22). For students transferring in 1998-99, the rate ranged from 35.5 percent for students transferring from Baltimore City Community College to 64.0 percent for students transferring from Chesapeake College. The graduation rates by college are shown in the following table.

Percent of Students Transferring in 1998-99 from the Following Community Colleges Who Graduated with a Bachelor's Degree within Four Years of Transferring

30-39 percent graduated in 4 yrs	40-49 percent graduated in 4 yrs	50-59 percent graduated in 4 yrs	60-69 percent graduated in 4 yrs
Baltimore City	CCBC	Allegany	Chesapeake
Prince George's	Garrett	Anne Arundel	Hagerstown
		Carroll	
		Cecil	
		CSM	
	. [	Frederick	
		Harford	Ì
	]	Howard	1
		Montgomery	
		Wor-Wic	

Transfer students from seven community colleges had four-year graduation rates at their transfer institutions that were at least three percentage points higher in 1998-99 than in 1991-92: Baltimore City, Carroll (since 1993-1994, the earliest year possible), Chesapeake, Hagerstown, Howard, Montgomery and Wor-Wic. Moreover, graduation rates among transfer students at Howard and Montgomery have risen steadily during the three most recent cohorts.

Transfer students from three community colleges had four-year graduation rates at their transfer institutions that were at least three percentage points lower in 1998-99 than in 1991-92: Cecil, Garrett, and Harford. At the first two of these colleges, the number of transfer students was in double digits in all cohorts, making percentages susceptible to large swings.

There was little change in the graduation rates of transfer students at the remaining community colleges.

## Campus Patterns: Four Year Colleges and Universities

Rates also varied greatly among public four-year colleges and universities regarding the percent of community college transfer students who earned a bachelor's degree at that campus within four years of transferring (Tables 23 through 35). For students transferring in 1998-99, the rate ranged from 21.0 percent at University of Maryland University College (likely due to the large number of part-time students who transfer to this institution) to 83.1 percent for University of Maryland Baltimore. The campus figures are displayed in the following table.

#### Percent of Students Transferring in 1998-99 to the Following Public Four-Year Institutions Who Graduated with a Bachelor's Degree within Four Years of Transferring

Coppin UMES	30-39% graduated in 4 yrs Morgan	40-49% graduated in 4 yrs Bowie UMBC	50-59% graduated in 4 yrs Frostburg Towson	60-69% graduated in 4 yrs Salisbury	70% or over graduated in 4 yrs St. Mary's UMB
UMUC			U Baltimore UMCP		CIVID

The graduation rates of community college transfer students were at least three percentage points higher in 1998-1999 than in 1991-1992 at Salisbury University, while the rates were at least three points lower at Frostburg, UMB, UMES, Morgan and St. Mary's. There was little change at the other public four-year campuses.
